## **Producer Price Index during September 2024(preliminary)**

- ☐ The Producer Price Index decreased by 0.2% month-on-month in September 2024 — in year-on-year terms it increased by 1.0%.
- The month-on-month changes in the major sub-indices are as follows:
  - o Agricultural, forestry & marine products: 5.3%
  - o Manufacturing products: -0.7%
  - o Electric power, gas, water & waste: 0.9%
  - o Services: -0.2%

# **Domestic Supply Price Index<sup>1)</sup> & Total Output Price Index<sup>2)</sup>** during September 2024(preliminary)

- 1) The Index measures changes in the price of goods and services supplied to the domestic market by the stages of production.
- 2) The Index measures changes in the price of goods and services produced by domestic producers.

☐ The Domestic Supply Price Index decreased by 0.8% month-on-month in September 2024 — in year-on-year terms it increased by 0.8%.

- The month-on-month changes in the major sub-indices are as follows:
  - o Raw materials: -3.5%
  - o Intermediate goods and services: -0.8%
  - o Final goods and services: 0.1%

#### (%) Month-on-month Year-on-year Weight<sup>1)</sup> 2024 2024 Jul Aug Sep<sup>p</sup> Sep<sup>p</sup> Jun Jun Jul Aug Domestic Supply 1000.0 0.0 0.2 -0.5 -0.8 3.7 4.3 2.4 0.8 Price Index 87.5 -0.3 -3.5 9.4 3.5 Raw materials -1.6 -0.3 8.6 -3.5 Intermediate 619.9 0.2 0.2 -0.8 -0.8 3.3 4.1 2.3 0.8 goods and services Final goods and 292.6 0.1 0.2 0.1 0.1 3.1 3.1 2.3 2.1 services

# 4. Total Output Price Indexes(Time Series)

 $9^{\circ}$ 121.20-0.71.1125.15The Indexes are preliminary and may be revised next month, < >: weight for 2024

(Appendix 1)

## 1. How the Producer Price Index is Compiled

#### 1. Definition and Use

- The Producer Price Index (PPI) measures changes in the price of goods and services produced and transacted in the domestic market. The index is used to measure business trend indicators, deflators, etc.

#### 2. Frequency

- The prices of goods and services are surveyed once a month.
- 3. Prices Surveyed: basic prices

#### 4. Items Subject to Survey

- For goods and services, the transaction amounts in the domestic market of only those items accounting for more than 1/10,000 of the total transaction amount and more than 1/2,000 of the total transaction amount respectively, and those that represent price fluctuations of items under the same classification are surveyed.
- Items marked without comparable price quotations for considerable period, e.g., ships, weapons, aircraft, works of art, etc., are excluded.

### 5. Method of Compilation

#### — Groups

- Basic Groups -- The main five categories are: Agricultural, forestry & marine products; Mining products; Manufacturing products; Electric power, gas, water & waste; and, Services.
- Specialized Groups -- Ten indexes fall under this classification: Foods/Excluding-foods; Fresh foods/Excluding fresh foods; Energy/ Excluding energy; IT/Excluding IT; Excluding foods & energy; and, Excluding fresh foods & energy.

— Weight: Weight is the ratio in permillage that shows how much the domestic transaction value of a selected item and its similar ones accounts for the universe of possibilities. It represents the importance of each item in the overall index.

	Category	No. of items	Weight
Total I	ndex	884	1,000.0
	Agricultural, forestry & marine products	70	34.5
	Mining products	6	2.1
Basic	Manufacturing products	687	504.8
	Electric power, gas, water & waste	14	71.2
	Services	107	387.4
	Foods	149	72.1
ľ	Excluding foods	735	927.9
	Fresh foods	45	14.9
	Excluding fresh foods	839	985.1
Speciali-	Energy	20	82.5
zed	Excluding energy	864	917.5
	Information Technology	70	101.2
	Excluding information technology	814	898.8
ľ	Excluding foods & energy	715	845.4
	Excluding fresh foods & energy	819	902.6

Number of Items	and Weight	of Each PPI	Category	(as of 2024)
-----------------	------------	-------------	----------	--------------

- Formula: A chain-weighted formula is used.

— Quality Adjustment Method: Methods such as production cost, direct comparison, overlapping, and imputation are generally employed to adjust for quality. The Hedonic regression method is applied to products such as PCs, for example, whose qualities are quantifiable by objective numeric values.

#### 6. Notes on Statistical Use

- The purpose of the PPI is to measure changes in the price, not to present absolute price levels.
- Prices of agricultural, forestry & marine products are bidding prices in wholesale markets rather than those at which farmers or fishers sell their products.
- The PPI may be compared with the Consumer Price Index (CPI), but should not be used to measure margins at the stages of producer and retail sales.

# 2. How the Domestic Supply Price Index is Compiled

#### 1. Definition and Use

— The Domestic Supply Price Index measures changes in the price of goods and services supplied to the domestic market by the stages of processing.

#### 2. Method of Compilation

- The Index aggregates and reclassifies the items in the Producer Price Index and Import Price Index.
- When the items in the Import Price Index are compiled by the prices at the contract point, are used for compilation of the Domestic Supply Price Index, they are adjusted by the time gaps between the contract point and the customs clearance point.

#### Weight of Each Domestic Supply Price Index Category (as of 2024)

Category	Weight
Domestic Supply Price Index	1,000.000
Raw materials	87.515
Intermediate goods and services	619.922
Final goods and services	292.563

#### 3. Notes on statistical use

- The final goods and services index seems to move similarly with the Consumer Price Index. The PPI, however, would show different movement patterns because it includes capital equipment that the CPI does not cover.
- The Import Price Index adjusted by the customs clearance time is different from the Import Price Index compiled by the contract prices.

	<b>Producer Price Index</b>	Import Price Index	<b>Export Price Index</b>
Goods	Goods produced and transacted in the domestic market	Imported goods	Exported goods
Services	Services produced and transacted in the domestic market	Domestic Supply	Price Index

#### **Coverage of Each Index**

# 3. How the Total Output Price Index is Compiled

#### 1. Definition and Use

- The Total Output Price Index measures changes in the price of goods and services produced by domestic producers.

#### 2. Method of Compilation

- The Total Output Price Index aggregates and reclassifies the items in the Producer Price Index and Export Price Index.
- The Export Price Index is compiled from the prices set by a contract between two parties, and customs clearance time should be considered and reflected in the index.

#### Weight of Each Total Output Price Index Category (as of 2024)

Category	Weight
Total Output Price Index	1,000.000
Agricultural, forestry & marine products	27.913
Manufacturing products	609.566

#### 3. Notes on Statistical Use

— The Export Price index is adjusted by the customs procedure time and is different from the Export Price Index compiled by the contract prices.

### **Coverage of each Index**
